Warehousing
Warehouses have highly specific system requirements. Simulation software can provide valuable insights that help increase efficiency in cross dock, storage, consolidation and other processes.

Royal HaskoningDHV’s FlexSim simulation software positions you to take advantage of these benefits by helping optimize warehouse space and layout, identify ways to improve inventory turnover, and increase productivity in picking operations.

Material Handling
Simulation software can also support in decreasing handling intensity and optimizing movement in material handling systems. This can result in an increase in picks per day as well as pick accuracy. Moreover, it can contribute to better ergonomics, employee motivation and job satisfaction.
Developed, designed and delivered for performance...
We understand that achieving high performance in your warehouse logistics while contending with the challenges of resource, time and capacity shortages is not only a reality but the basis of strong chain logistic management for your organization.

Trust Royal HaskoningDHV as the chain manager to develop, design and deliver the services, solutions and tools to drive your business performance.
